WEEKLY MORBIDITY REPORT  
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

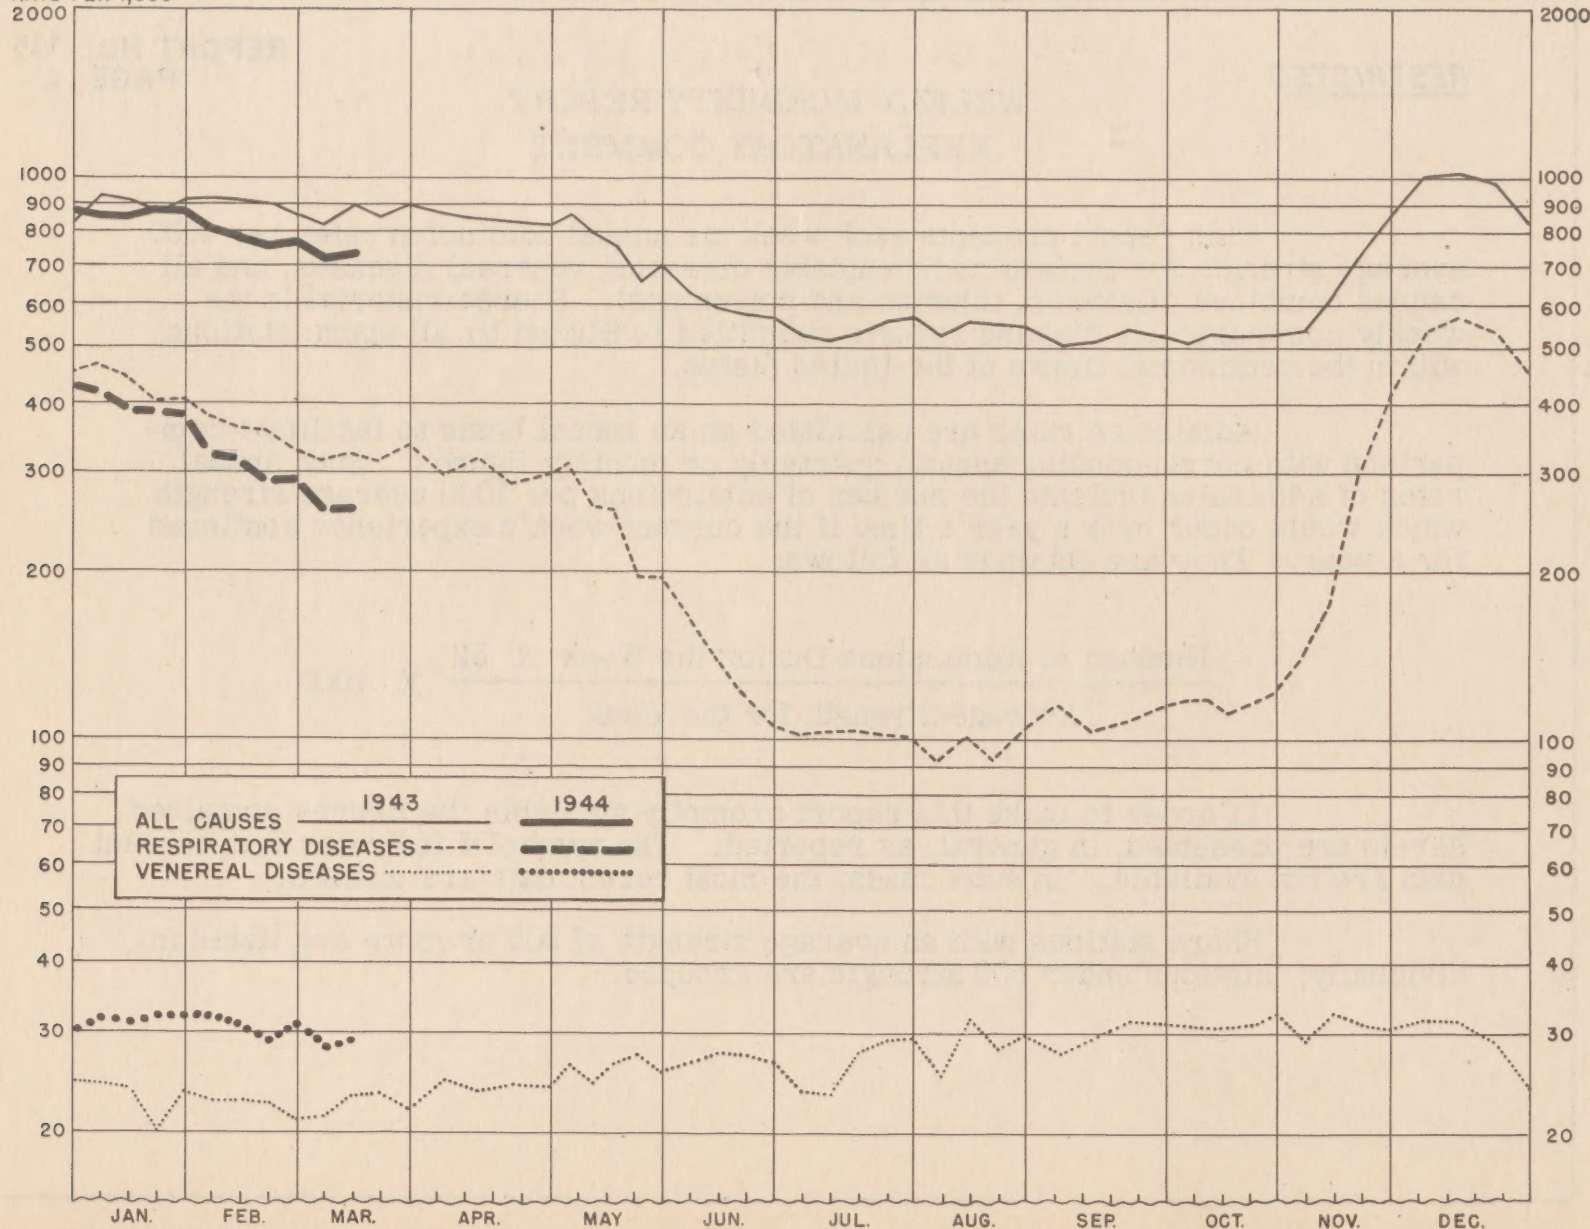

RESTRICTED

ANNUAL ADMISSION RATES PER 1,000 AVERAGE STRENGTH, BY WEEKS  
FOR CERTAIN RESPIRATORY DISEASES, VENEREAL DISEASES, & ALL CAUSES,  
CONTINENTAL LIMITS OF THE UNITED STATES: 1943-1944

REPORT NO. 115  
PAGE 2

RATE PER 1,000

\* INCLUDE: CATARRHAL FEVER, ACUTE; INFLUENZA;  
PNEUMONIA-BRONCHO, LOBAR & ATYPICAL;  
TONSILLITIS, ACUTE (1944 ONLY) PHARYNGITIS, ACUTE (1944 ONLY).

CURRENT TRENDS

Week Ending 11 Mar 1944

Though the curve for Admissions All Causes shows a slight rise this week, the general trend for the year to date has been downward. The rate remains well below that of the corresponding week of 1943.

The respiratory-disease curve turned slightly upward but it also shows a generally downward trend since 1 Jan 1944. It continues to lie below the 1943 level for the corresponding period.

The venereal-disease curve rose slightly. Though the rate for these infections stands well above the rate for the corresponding week of 1943, it is still less than 30.0 and below the peak rate experienced in November of 1943.

Influenza and Catarrhal Fever. The incidence of these infections continues to fall and stands for this eleventh week of the year at a point well below that recorded for the same weeks of 1942 and 1943. A falling curve was shown in all Districts except the 11th. The highest rate for the week was again reported from the 9th District, the lowest from the 7th District.

Pneumonia--Broncho and Lobar. The curve stands for another week at 4 but this appears to be but a temporary halt in the trend which is definitely downward. This week's rate stands at a point intermediate between that of 1942 and 1943 for the corresponding week. The rate of 18 in the 13th District is three times that in the District with the second highest rate. The 6th and 12th Districts report a rate of only 1.0.

Pneumonia, Atypical. After standing for 5 weeks at a rate of 4, the curve for this infection dropped this week to 3.0. This is at a point still well above that reported for the corresponding week of 1943. The 11th District again reports the highest rate; the 12th District the lowest.

CURRENT TRENDS--CONTD.

Rheumatic Fever, Acute. The rate for rheumatic fever, acute, dropped this week to 4.0 after standing for two weeks at 5. This represents a considerable improvement over the rate of 6.0 reported for the week ending 12 Feb 1944. The lowest rate was reported from the 6th District, the highest from the 13th District.

Scarlet Fever. For another week the scarlet fever incidence stands at 11.0. Though still above the rate for the corresponding weeks of 1942 and 1943 the trend would appear to be downward dating from the peak rate of 21.5 reached in the week ending 1 Jan 1944. The 9th District reports the highest rate, the 13th District the next highest rate. The 7th District reports no scarlet fever.

Cerebrospinal Fever, Meningococcic. The rate for this infection continues relatively low. The 4th, 6th, 12th and 13th Districts and the Potomac and Severn River Commands report no cases for the week.

Malaria. A rate of 3 is reported for the fifth consecutive week. The curve stands at a point well above that recorded for the corresponding week of 1942 and 1943 but it is well below the peak rates reported in August, September, and October, 1943. Only one District, the 6th, reports no cases. The highest rates are reported by the 11th and 12th Districts.

Measles. A drop to 15 this week represents an improvement over the peak rate of 20.0 reported for the week ending 29 Jan. For the first time this year the curve stands below that of the corresponding week of both 1942 and 1943. The highest rate is reported from the 9th District and the next highest rate for the 13th District. The lowest rate is reported by the 12th District.
